

# The Metaverse

Quantum Labor Analysis Report

SkyHive

Unleashing Human Potential

### **3 Executive Summary**

### **4 Unleashing Human Potential**

### **5 Methodology**

### **6 Metaverse Characteristics**

### **8 Metanomics**

- Metaverse Growth
- Potential Market Opportunity
- Global Labor Market Demand
- Lagging Demand

### **13 Pioneers of the Metaverse**

- Industries
- Companies

### **17 Metaverse Layers**

- Experience & Discovery
- Computing & Technology
- Decentralization
- Interface
- Core Infrastructure
- Skills Analysis
- Metaverse Applications

### **26 Skills and Jobs of the Metaverse**

- Skills of the Metaverse
- Technical Jobs
- Non-technical Jobs
- Future Jobs & Skills

### **31 Next Steps**

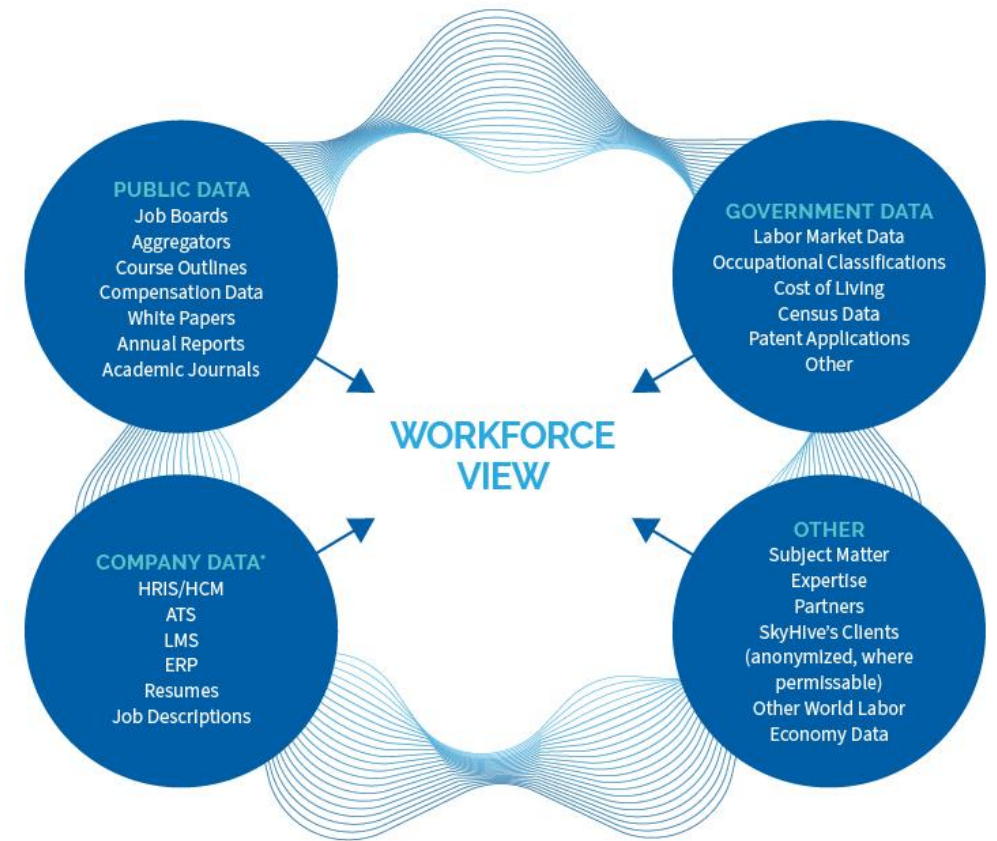

- Courses & Learning Content
- Metaverse Readiness
- In the Metaverse

## Executive Summary

**SkyHive's Quantum Labor Analysis®** analyzes publicly available people and company data, which is enriched using artificial intelligence to provide comprehensive labor market analysis.

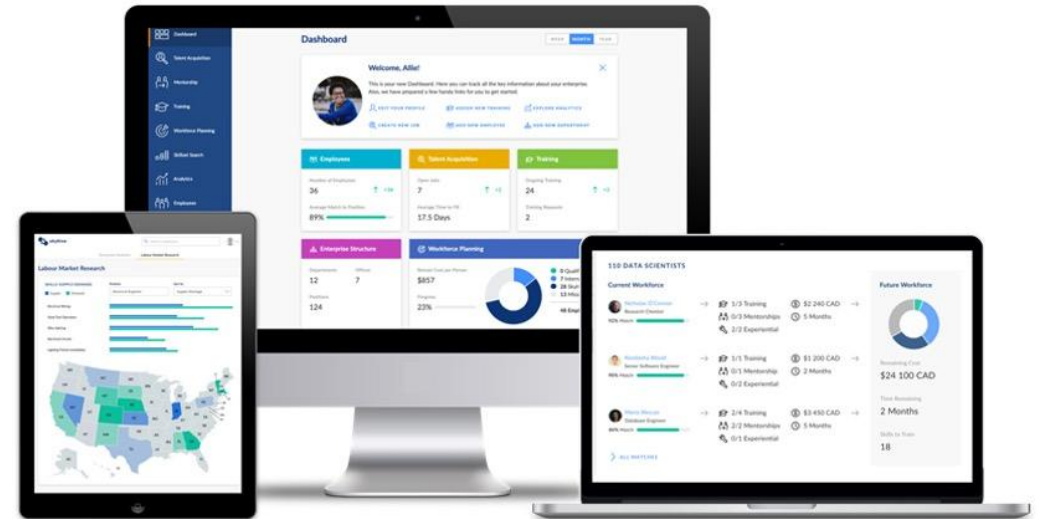

We used our technology to analyze all publicly available data on all companies and people pertaining to the Metaverse / Web3 from supply, demand, current and future skills, and learning and development perspectives.

## Unleashing Human Potential

**SkyHive is on a mission to optimize labor market efficiencies in real-time for companies, communities and national economies. We power the future of work at its most granular level: skills.**

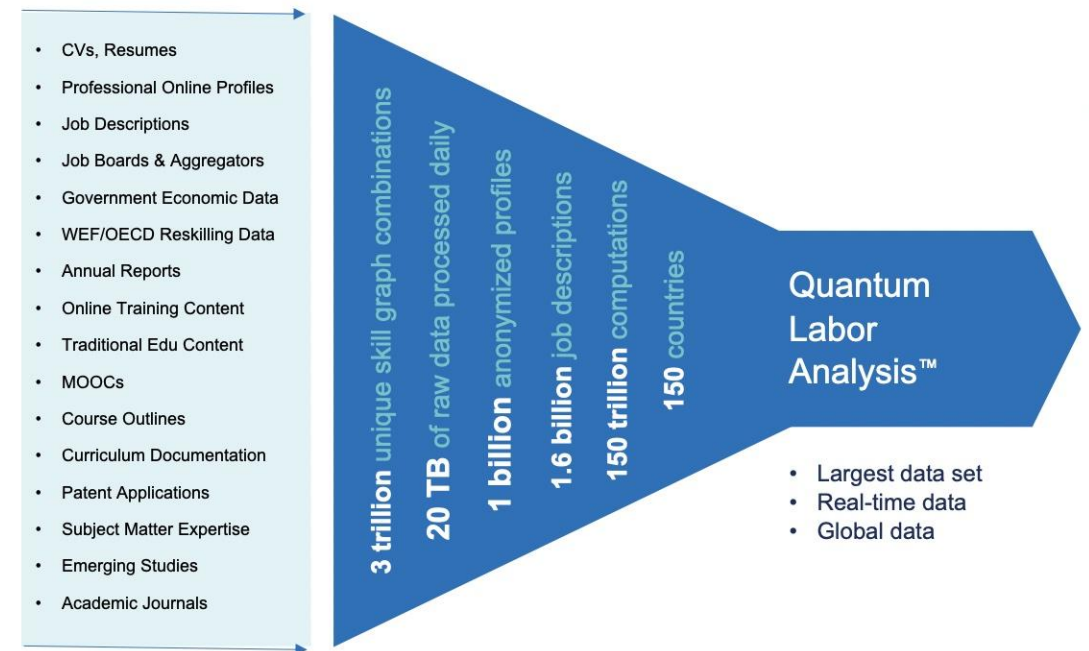

Real-time, global labor market data with transparent and unbiased artificial intelligence provides actionable insight into current and emerging skills, skills gaps, industry benchmarks and reskilling options.

## Methodology

### Where does SkyHive's data come from?

- Global data from 150 countries
- Knowledge graph comprising of 6.2B nodes and 2.8 trillion relationships
- Engine computing 150 trillion data points per day across various dimensions; ingesting ~20TB of raw data each day
- Data stored in an Advanced Data Lakehouse Architecture
- Ability to ingest and process data in multiple languages
- Data partitioned across multiple dimensions:
  - Geography
  - Time
  - Job families
  - Industry
  - Contextual

## Metaverse Characteristics

**Gartner predicts 25% of people will spend at least an hour a day in The Metaverse in 2026 participating in events, educational activities and playing, interacting, shopping, or working.**

**The Metaverse** is a massively parallel network of interoperable 3D worlds with interconnected synchronous experiences and sense of presence built by applications, devices and products, tools, and infrastructure. It encompasses data, identity, history, entitlements, objects, communications, and payments.

It is dematerialization of physical space, distance, and objects.

It is the new internet that reprograms our experiences and changes the workforce.

# Metaverse Characteristics

- Open to All
- Successor of the Internet
- Functioning Economy
- Interoperability
- Sense of Presence
- Immersive
- Interconnected Spaces

# Metanomics

## Metanomics

**The rapidly accelerating pace of Metaverse growth** can be seen through the increase in spend across different industry segments spanning 2020, 2021, and now currently in 2022; alongside predictions through 2024.

### The Metaverse Growth 2020 to 2024

Source: Bloomberg

## Metanomics

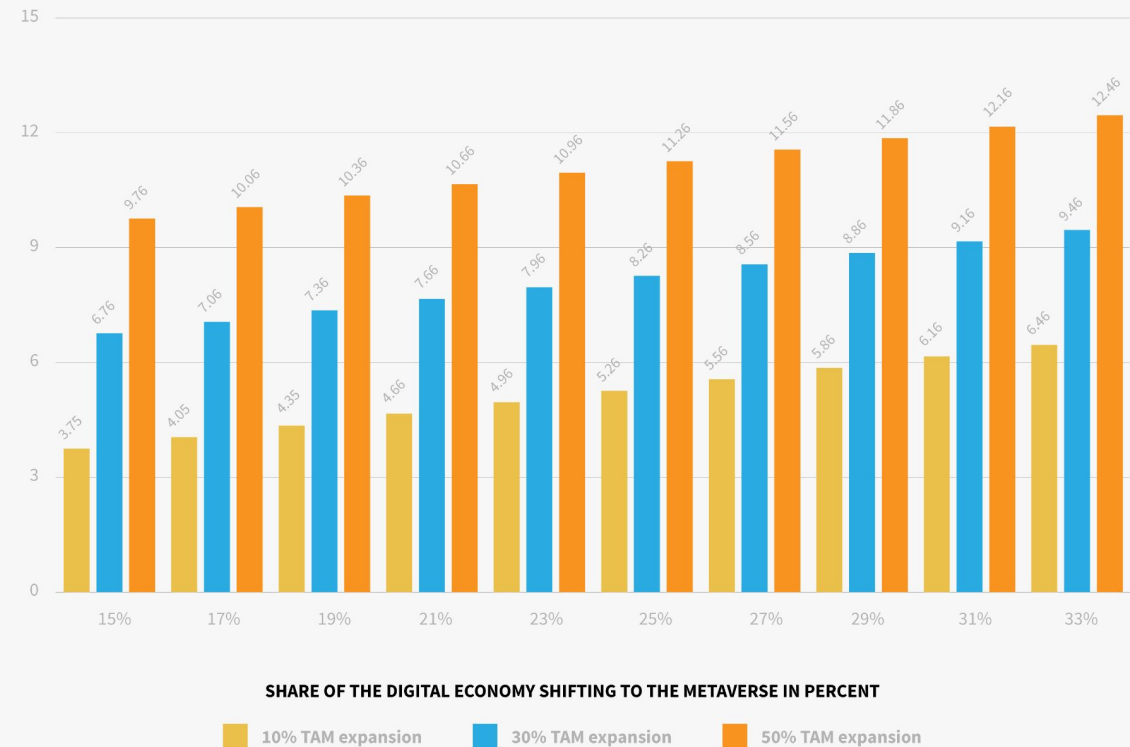

### Potential Market Opportunity

There is large potential market opportunity globally as we shift from the digital economy to the Metaverse economy.

Despite trillions of dollars in Metaverse potential market opportunity globally, current labor market data is not depicting an increase in demand.

Consequently, it appears that market opportunity is not translating to job opportunity, resulting in an insufficient push for workers getting trained and acquiring necessary skills.

**Metaverse potential market opportunity worldwide 2021, by scenario  
(in trillion U.S. dollars)**

Additional information: Worldwide; Goldman Sachs; 2021

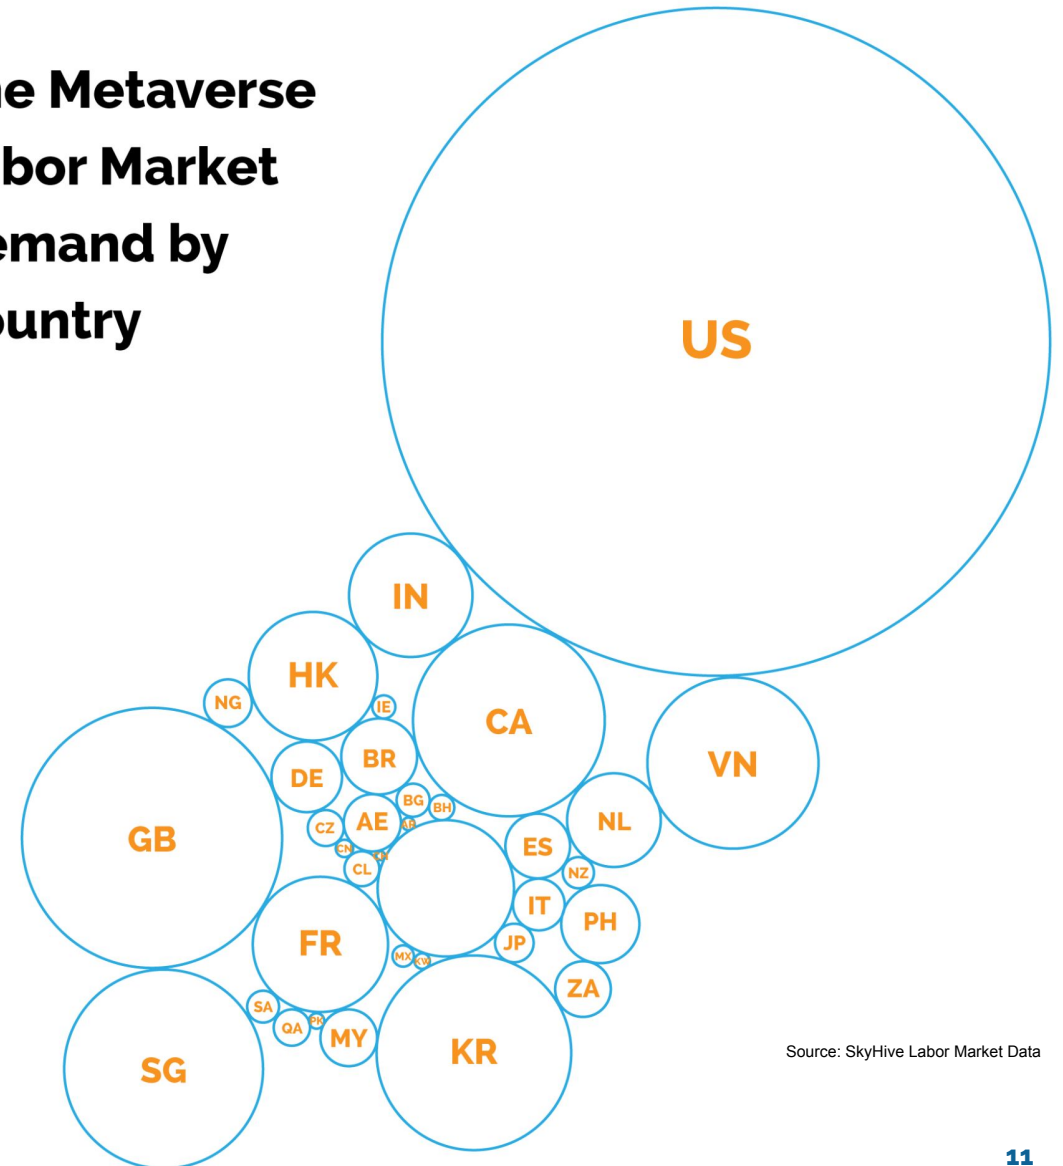

## Metanomics

### Global Labor Market Demand

While there is unprecedented growth in projects related to the Metaverse, the current global labor market is not accurately reflecting the full picture. It's critical that global business leaders leveraging human capital management (HCM) technologies understand the scope of the Metaverse's impact on workforce planning activities and skills needed to succeed.

The U.S. leads the way in Labor Market Demand for Metaverse-related workers and skills, followed by the United Kingdom, Canada, South Korea, Singapore, and Vietnam.

### The Metaverse Labor Market Demand by Country

Source: SkyHive Labor Market Data

## Metanomics

### Lagging Demand

Current supply and demand demonstrates that potential market opportunity and growth in the Metaverse activity is not yet reflected in the global labor market.

This could be because specific jobs are hidden categorically, obscured behind broader sectors such as gaming or AR/VR. As the Metaverse industry expands rapidly, accurate and real-time labor market data is needed to depict true supply and demand.

#### Metaverse Supply and Demand

Source: SkyHive

A low-angle shot of a woman in a black dress looking up at several tall skyscrapers. The image is heavily stylized with digital effects. A large, bright, circular lens flare with a red and orange gradient is positioned in the upper left. A large, semi-transparent green sphere is centered in the background. In the foreground, there are two large, wavy, golden-yellow digital mesh structures that resemble data waves or sound waves. The overall color palette is dominated by deep blues, teals, and oranges from the lens flare.

# Pioneers of the Metaverse

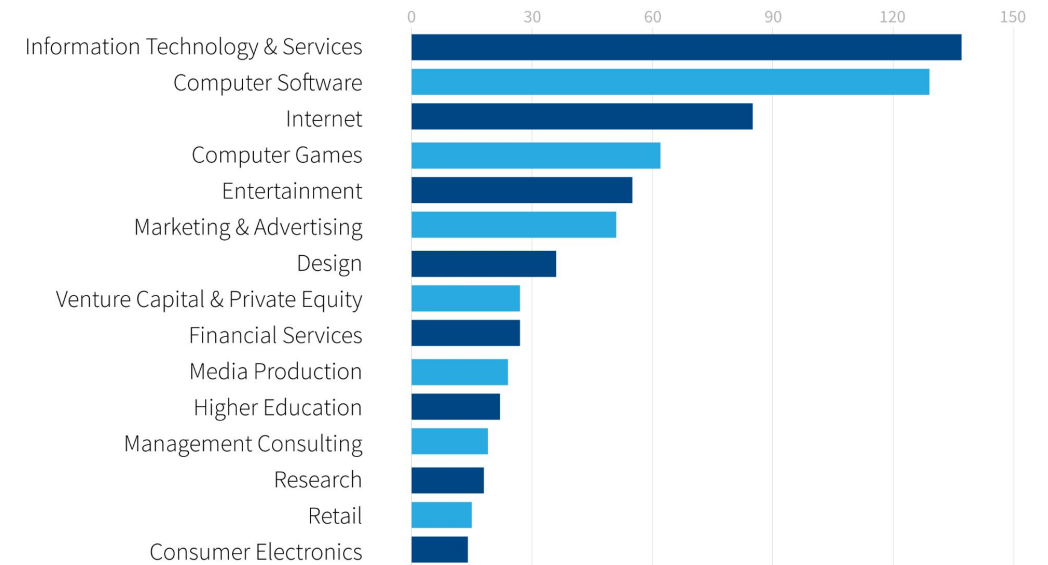

## Pioneers of the Metaverse

### Top Industries

The top industry venturing into the Metaverse is Information Technology & Services, followed by Computer Software, Internet, Computer Games, and Entertainment.

However, out of 50 industries identified using our technology, many unexpected sectors also fall on the upper half of the industries entering the Metaverse including Financial Services, Higher Education, Management Consulting, and Research.

### Top 15 Industries Entering the Metaverse

### Other Industries Entering The Metaverse

Animation	Computer Hardware	Apparel & Fashion	Electrical & Electronic Manufacturing	Architecture & Planning
Arts & Crafts	Consumer Services	Events Services	Hospital & Health Care	Automotive
E-learning	Fine Art	Food & Beverages	Health, Wellness & Fitness	Aviation & Aerospace
Education Management	Motion Pictures & Film	Human Resources	Investment Banking	Construction
Nonprofit Organization Management	Music	Insurance	Photography	Defense & Space
Telecommunications	Public Relations & Communications	Performing Arts	Professional Training & Coaching	Law Practice
Writing & Editing	Real Estate	Sports	Staffing & Recruiting	Market Research

**The growing list of traditional companies building Metaverse capabilities today**

demonstrate that advanced technology companies are not alone in building Metaverse-ready capabilities within their workforces.

## Companies Entering the Metaverse

HARDWARE	SOFTWARE	SOCIAL MEDIA	GAMING	MEDIA & ENTERTAINMENT	RETAIL
Acer Facebook HP Lenovo Logitech Microsoft NVIDIA Razer Sony Valve	Adobe Ansys Autodesk Unity Unreal	Meta Tencent	Activision Arts Blizzard Electronic Epic Games Microsoft NetEase Roblox Tenacent Valve	Live Nation Sports Teams Theme Parks	Balenciaga Burberry Gucci Louis Vuitton Nike Ralph Lauren Tommy Hillfiger Vans Walmart Zara

# Metaverse Layers

## Metaverse Layers

The Metaverse can be categorized into seven layers with unique challenges and opportunities for employers, workers, and investors.

The layers provide a structural way of thinking about and building upon the Metaverse.

Each layer can help better conceptualize what is needed for Metaverse readiness and in the Metaverse, from infrastructure to apps, to a functional ecosystem.

Credit: John Radoff Metaverse Layers

## Metaverse Layers

### Experience & Discovery

The experience and discovery layers are how people are already experiencing the Metaverse—shopping, gaming, engaging with content, and building or participating in immersive worlds—and discovering new experiences through information-sharing and marketing systems.

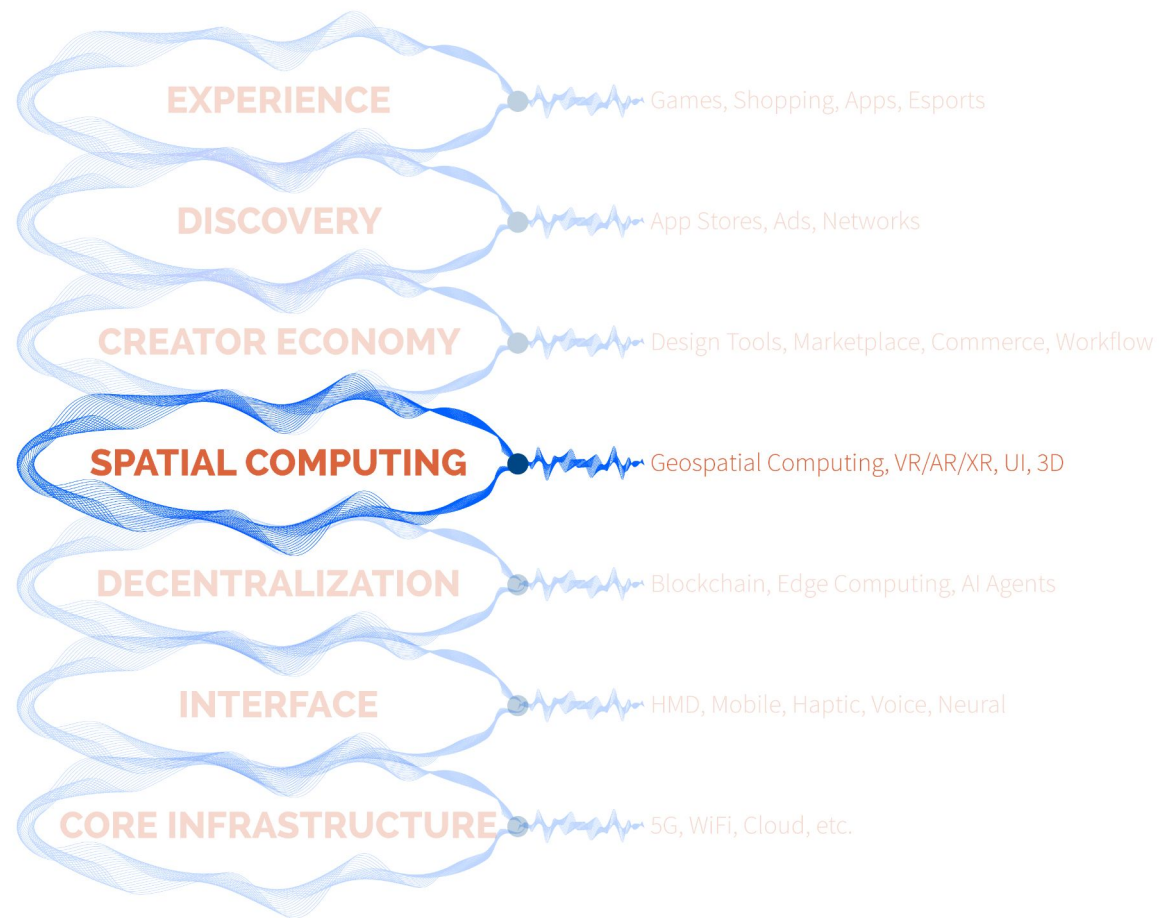

Credit: John Radoff Metaverse Layers

## Metaverse Layers

### Computing & Technology

Metaverse is the world that surrounds us and is going to be everywhere. It requires planet-scale infrastructure and simulation capabilities—and requires jobs and skills mainly in the areas of Hardware Infrastructure, Network, Edge/Cloud. Additional areas being affected include Computer Vision, AI, Blockchain, Robotics, and IoT.

Credit: John Radoff Metaverse Layers

## Metaverse Layers

### Decentralization

Metaverse is paving the way to a decentralized web. Having an interoperable, open-source public chain will be essential for ensuring that various virtual worlds can interlink and overlap each other in a seamless way. Blockchain offers digital proof of ownership for assets in the Metaverse and core carriers of the Metaverse digital economy are decentralized finance (DeFi) and non-fungible tokens (NFTs).

Credit: John Radoff Metaverse Layers

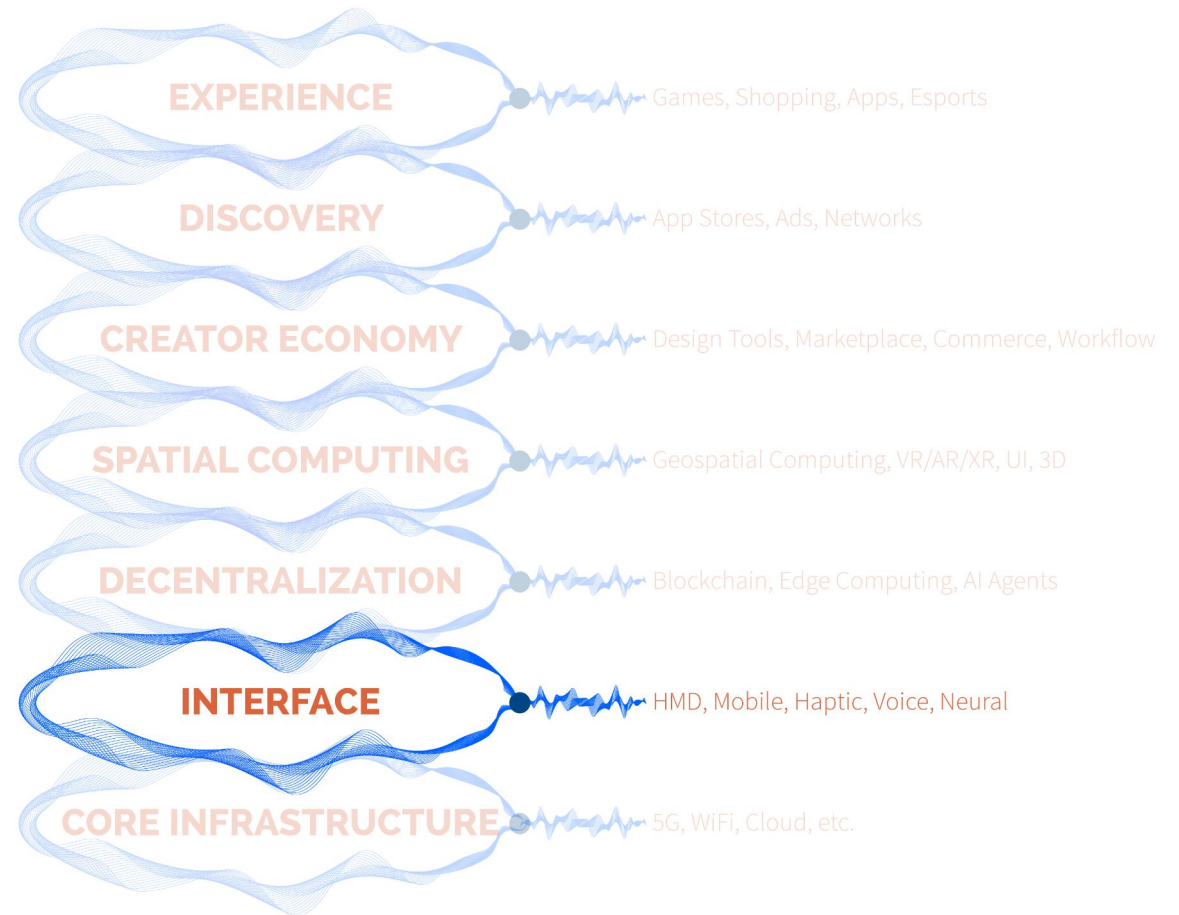

## Metaverse Layers

### Interface

We are seeing a deluge of new platforms with immersive technologies, collaboration systems, eye-tracking technology and facial tracking, biometrics, and brain-control interfaces.

Non-intrusive Human Computer Interface (HCI) technologies are needed to enable breakthrough AR glasses and VR headsets; including optics and displays, computer vision, audio, graphics, brain-computer interface, haptic interaction, and eye/hand/face/body tracking.

The interface layer requires faster emergence of perception science and related jobs. The Metaverse will evolve to incorporate anything display capable.

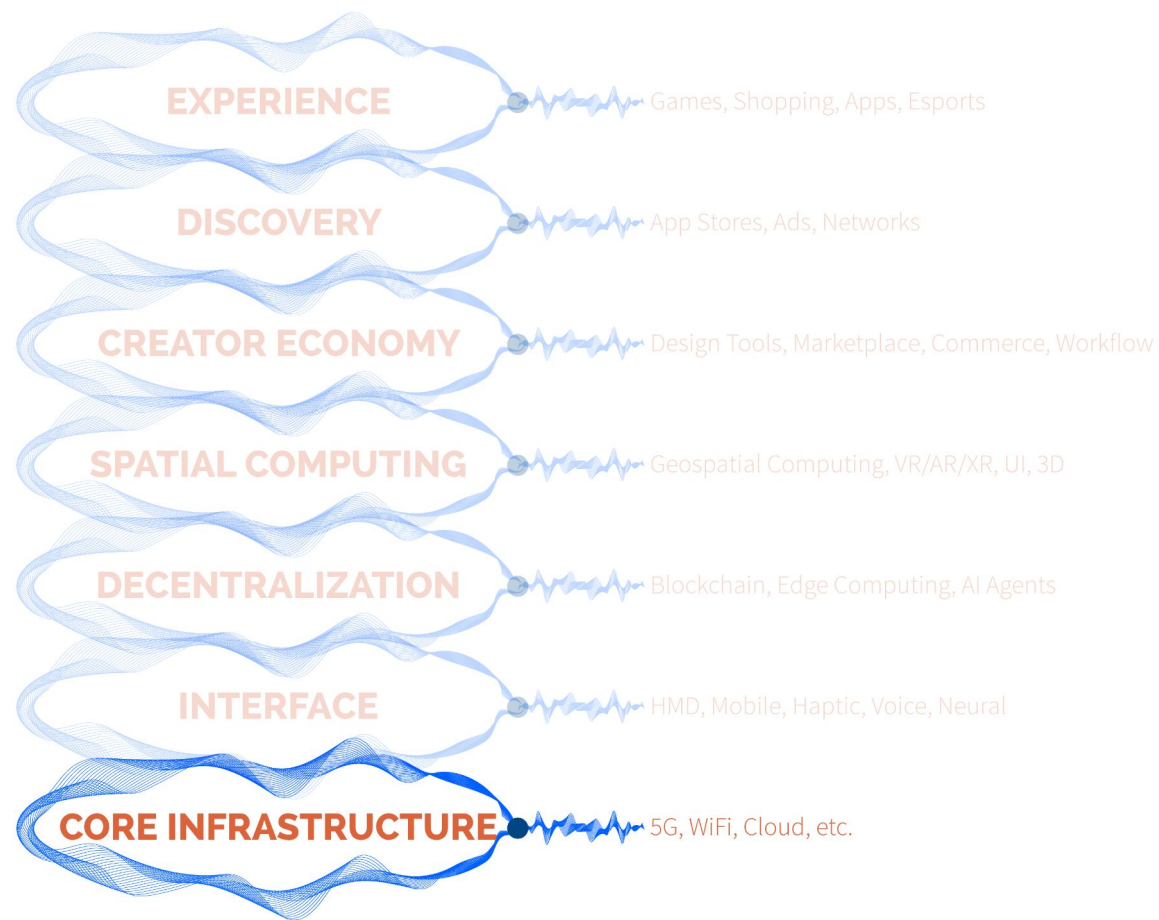

Credit: John Radoff Metaverse Layers

## Metaverse Layers

### Core Infrastructure

Interactive 3D Metaverse requires systems to be built with textured media from video and audio. These require peak upload and download network speeds. Growing access to 5G can support the ongoing development of the Metaverse by providing the speed and power that make it possible for digital worlds to function. The Metaverse presents an unprecedented opportunity for the connectivity industry and needs significant advancements in network speeds, network latency, and speeds to achieve consistent quality of experience. Apart from regular 5G jobs, we see an increase in specialist 5G Mobile Edge Computing jobs—both on applications and at network level. Some of these jobs will include AR/VR Product Quality Engineering and Cellular Firmware Engineering.

Credit: John Radoff Metaverse Layers

# Metaverse Layers

## Skills Needed By Layer

Using our labor-market analysis and proximity analysis of specific areas like gaming development and 3D interface development, we can pinpoint specific skill demand emerging in relation to individual Metaverse layers including interface, spatial computing, and more.

## Applications/End-Users

By taking a closer look at the Metaverse layers, we can see how the global Metaverse will affect jobs and skills needed across many areas including retail and commerce, advertising, networks, design, marketplace, computing, and more. By looking more closely at each Metaverse layer, we can see the rapid pace at which many industries are being impacted.

INTERFACE SKILLS	COMPUTING SKILLS	APPLICATIONS/END-USERS
3D Deep Learning Advanced Real-time Rendering Character Animation Face Tracking Full Body Capture Full Body Tracking Human Performance Capture Image and Video Manipulation Material and Lighting Capture Mesh Deformation and Geometry Processing Neural Rendering Physics Based Simulation Real-time Facial Animation Volumetric Capture	3D Rendering of Real-time Physically Accurate Simulation 3D Rendering of Virtual Collaboration AI Agents AI Assistants Commerce Engines Deep Learning Digital Twins Geospatial Computing Human Factors Real-time Physics Simulation Real-time Ray Tracing Real-time Data from IoT Devices The AI as a Creative Collaborator Virtual Beings Physics Based Simulation Real-time Facial Animation Volumetric Capture	Aerospace and Defense Content Creation Education Fashion Gaming Media and Entertainment Others Retail Social Media

## Metaverse Applications

**Arium** - Virtual social experience platform for architects, curators, and artists

**Atlantis** - Virtual World, Web 3 Social Metaverse

**Atta** - Entertainment Metaverse

**Bloktopia** - Decentralized Metaverse built and backed by the Polygon Network

**Bullieverse** - Open Metaverse

**Cryptovoxels** - Virtual World for stores and art galleries on Ethereum Blockchain

**Decentraland** - Platform enabling users to be a part of a shared virtual world. Virtual ecosystem where users can buy or sell digital property, play games, exchange collectibles, socialize, interact, and explore

**Metafactory** - 'Digiphysical' goods that connect multiple worlds via NFTS and embedded microchips

**Metamall** - Social shopping

**Metaring** - Unique wearables and digital collectibles

**Metaverse Property** - World's first virtual real estate company

**Momentum** - Metaverse stack for Web3 communities

**NFTworlds** - 10,000 virtual worlds on the Ethereum Blockchain

**Nifty Island** - Open social gaming platform

**Portals** - Browser-based Metaverse

**RareRoom** - Custom virtual spaces

**Ready Player Me** - Cross-game Avatar platform

**Somnium Space** - Virtual World

**Space** - Immersive commerce without any barriers

**Spatial** - Platform for creators and brands

**SuperWorld** - Virtual World where users can buy, sell, or curate 64B unique plots of virtual land

**Terra Virtua** - Immersive collectibles platform

**The Fabricant** - Platform where anyone, anywhere can become a digital fashion creator and participate in the digital fashion economy. By 2025, 100 million people will be Metaverse-ready by wearing digital garments minted in The Fabricant Studio

**The Sandbox** - Virtual World to build games

**Upland** - Property trading Metaverse connected with real-world addresses

**Wallmeta** - Virtual shopping

**Wilder World** - Immersive 5D Virtual World

# Skills and Jobs of the Metaverse

## Skills and Jobs of the Metaverse

Many jobs and skills are emerging based on current and emerging in-demand jobs.

However, there is a massive skills gap and the labor market still needs to catch based on the economics of the Metaverse.

We pulled the top in-demand Metaverse skills using real-time, comprehensive future-skills analysis from SkyHive's Quantum Labor Analysis Platform. Future-skills predictions enable individuals, companies, and communities to take a deeper look at what's needed to prepare for the future world of work.

### Top Metaverse Skills

TECHNICAL SKILLS	CREATIVE SKILLS	BUSINESS SKILLS	MARKETING SKILLS	SOFT SKILLS
Artificial Intelligence Augmented Reality Bitcoin Blockchain Cloud Computing Computer Cryptocurrency Development Digital Compositing Game Design Interaction Internet of Things Microsoft Office Numpy Python Robotics Rotoscoping Software SQL System Architecture Virtual Reality	Adobe Animation Creative Fiction Creative Services Creative Strategy Design Fashion Design Film Production Film Analysis Fine Art Flash Animation Graphic Design Interior Design Motion Design Music Photography Photoshop Production Screenwriting Soundtrack Typography Videography	Business Development Business Modeling Business Planning Business Strategy Competitive Analysis Consulting Corporate Communications E-commerce Event Planning Financial Modeling Financial Structuring Fundraising IM&A Management Market Research Merchandising Production Project Management Qualitative Research Research Sales Strategic Forecasting Training Trend Analysis	Advertising Channel Partner Development Communications Digital Journalism Digital Marketing Marketing Media Relations Product Marketing Public Relations Social Media Storyboarding	Business Intelligence Creative Direction Critical Thinking Cross-functional Team Leadership Entrepreneurship Futurism Relationship Management Futurism Message Development Storytelling Strategic Communications Writing

## Skills and Jobs of the Metaverse

### Top Technical Jobs in the Metaverse

Inside the Metaverse, jobs and career pathways are beginning to crystallize. Soft skills, technical proficiencies, and communication capabilities provide an entryway to careers in the Metaverse industry outside of traditional skill requirements for computer science and engineering roles.

The figure on the right depicts top technical jobs currently needed for Metaverse readiness.

#### Top Emerging Metaverse Technical Jobs

##### Avatar Tool Designer

Responsible for the design of tools to help create Avatar assets, animations, emotes, rigs, body meshes and other related items and create diverse experiences.

##### Blockchain Developer

Design, maintain and deploy smart contracts, security and best practices for contract development, implications of data on the blockchain and associate costs due to complications.

##### Data Engineering

Expertise in quantitative analysis, data mining, and the presentation of data in developing data-informed strategies for growing and improving metaverse product offerings.

##### Data Science

Expertise in computer vision, NLP-language models and recommendation systems.

##### Metaverse Economist

Utilize economic methodologies, behavioral psychology, and business intelligence, intersection of economics and product design to identify the optimal trade-offs across multiple design dimensions.

##### NFT Engineer

Design, build and ship backend services for millions of users to create, buy, sell and use NFT-backed digital goods on Solidity, Ethereum or any blockchain.

##### QA Engineer

Debugging issues across the hardware and software stack.

##### Security Engineer

Design and operationalize strategic security programs by making them efficient, scalable and reliable. Implements tools and automation to proactively detect security risks and threats for internal systems.

##### Software Engineer

Design, develop, test, deploy, maintain and enhance software solutions.

##### Unity Developer / Frontend Developer

UI application development, 3D asset integration and networking.

Source: SkyHive

## Skills and Jobs of the Metaverse

### Top Non-Technical Jobs in the Metaverse

Inside the Metaverse, jobs and career pathways are beginning to crystallize. Soft skills, technical proficiencies, and communication capabilities provide an entryway to careers in the Metaverse industry outside of traditional skill requirements for computer science and engineering roles.

The figure on the right depicts top non-technical jobs currently needed for metaverse readiness.

#### Top Emerging Non-Technical Jobs in the Metaverse

##### Storyteller

High-level position responsible for crafting compelling and immersive storylines for various genres of games and experiences including social, action, sports, simulation, puzzle, role-playing, educational, and training.

##### Marketing Specialist

With the metaverse market expected to reach \$814.2 billion by 2028, one of the most in-demand roles in the metaverse is metaverse marketing expert.

##### Social Media Manager

Responsible for community engagement through blockchain social tokens, showcase experiences, expert in content curation, community management, and communications.

##### Governance Manager

Responsible for managing the ongoing evolution and implementation of the governance controls related to metaverse.

##### Commerce Program Manager

Overseeing commerce-related activities in the metaverse, such as the purchases of SaaS and related products.

##### Product Manager

Managing large-scale demand for products and content and owning the end-user experience.

##### Business Development Manager

Developing innovative growth ideas and actively shaping new business opportunities in and for virtual worlds.

##### Project Manager

Owning the delivery process of Metaverse projects and playing a key role in coordinating all internal and external parties (e.g., brand, celebrity, agencies, community).

##### NFT Drop Manager

Driving the whole NFT Drop process, from inception to final release, and playing a key role in coordinating all internal and external parties.

##### Futurist

Evangelize metaverse and make future predictions based on current trends.

Source: SkyHive

# Future Jobs & Skills of The Metaverse

**These are the future jobs and skills that will emerge and be needed in the Metaverse.**

## Metaverse Scientist

- Advanced Computer Vision
- Intelligent Content Creation
- AI Agents

## Metaverse Planner

- Planning for virtual worlds
- Business cases
- SaaS/PaaS

## Ecosystem Developer

- Coordination with partners, governments, and communities
- Cross-functional skills

## Metaverse Safety Manager

- Guidance and oversight
- Regulatory safety requirements
- Content moderation

## Metaverse Hardware Builder

- New HMDS
- Sensors and cameras
- Complex consumer electronics

## Metaverse Story Teller

- Advanced Computer Vision
- Intelligent Content Creation
- AI Agents

## World Builder

- Guidance and oversight
- Regulatory safety requirements
- Content moderation

## Metaverse Cyber Security

- Prevent NFT theft
- Prevent fraud, hacking avatars
- Prevent data leaks

## Metaverse Privacy

- Sensor data privacy
- Advanced privacy standards

## Metaverse Lawyer

- New liabilities
- Contract Law

## Metaverse Financial Analyst

- Tokenomics
- Market place

## Metaverse Neuroscience

- Connecting the optic and vestibulocochlear nerves and allow data to translate the meta-reality to the brain directly as if we really saw and heard the simulated world

Source: SkyHive Labor Market Data

# Next Steps

## Next Steps

What skills are needed for a lawyer in the Metaverse?

What skills are needed to sell real estate in the Metaverse?

What skills are needed to sell insurance in the Metaverse?

What skills are needed to teach in the Metaverse?

What skills are needed for banking in the Metaverse?

## Next Steps

### Metaverse Courses & Learning Content

Metaverse technologies should result in increased demand for skilled workers who know how to use technology to enhance workplace productivity.

Several universities started to incorporate *Metaverse*, *Virtual* and *Augmented* reality into their curriculum. Notable of them is Stanford's *Visions of the Future: Artificial Intelligence, Cryptocurrency, the Metaverse, and Beyond*. Along with universities there are few online courses that are emerging, however there aren't many given the potential and proliferation. Here are few online courses:

- Coursera
- Digital Fashion Reality
- Virtual Reality Specialization
- Udemey
- Metaverse Masterclass — Learn Everything about the Metaverse!
- Metaverse: Learn the Facts behind the "Metaverse" Fad
- Metaverse, Blockchain, Investment, NFT, Digital wallet, Digital ID, VR, AR, Digital Twin: Future
- Virtual Real Estate Investing in the Metaverse
- Blockchain Council
- Certified Metaverse Expert

## Next Steps

### Metaverse Readiness

While we are still in the early stages of the Metaverse, the labor market has proven slow to adapt for Metaverse readiness. The number of jobs and variety of skills needed are exceptionally low compared to the market opportunities, paired with an inadequate amount of learning content and courses available to support Metaverse career paths. This poses significant challenges which require careful evaluation and ample support from emerging jobs and skills.

The Metaverse will transform the data security and payments industries. Actual and digital currencies will connect to enable fast and effortless exchange, reputation and identity will differ significantly from their real-world counterparts, new verification methods need to be developed, and data security and privacy will need to evolve substantially. New regulatory policies and security measures will unlock an abundance of security and privacy jobs, and a new breed of skills and competencies must be rapidly developed to tackle these critical security and privacy issues.

## Next Steps In the Metaverse

What's going to happen when the real and digital landscapes converge? While we can predict what's needed for Metaverse readiness, a blank page still exists in the Metaverse.

The most substantial challenge may be ensuring users are secure and protected while engaging in trade within the Metaverse. This requires Metaverse-specific law and jurisdiction related to identity and ownership rights, permeating between real and virtual worlds. As the Metaverse continues its rapid expansion, many industries and roles will be significantly disrupted and reimagined — and consequently, so will the global labor market and our approach.
